A recent IT graduate with a strong academic background and a passion for technology. Skilled in various programming languages, with experience from projects and studies. Have good communication skills, work well in a team, and always eager to learn and adapt to new technologies. Looking forward to contributing to the IT team, improving technical skills, and helping achieve success.

EDUCATION

Post Graduate Diploma in Advanced Computing (PG-DAC)

- IET C-DAC ACTS ATC Pune | Percentage: 60.75% | August 2024

Bachelor of Engineering (BE) in Computer Engineering

- SPPU | CGPA: 7.46 | Percentage: 67.10% | 2021 - 2024

Diploma in Computer Engineering

- MSBTE | Percentage: 88.71% | 2018 - 2021

SSC

- S.S.G.S.Savda | MSBSHSE | Percentage: 77.60% | 2018

TECHNICAL SKILLS

Language: C# (.NET), Java (Spring Boot), C++, Node.js (JavaScript), Python, HTML, CSS

Server-Side: Spring Boot, ASP.Net, Selenium Java, JSP, Servlet, JDBC, Hibernate, REST API, MySQL, SQL, MongoDB

Tools: Eclipse, Visual Studio 2022, AWS, GitHub, Docker, Visual Studio Code (VS Code), Postman, Swagger, JIRA, MySQL Workbench

Frameworks: React (Library), Spring Boot, Spring, ASP.Net

Front-End: React, CSS, HTML, Bootstrap, jQuery, JSON

PROJECTS

1. Commercial Vehicle Auction (CV-Auction)

Technologies: Java, C# (.Net), JavaScript, HTML, CSS, Bootstrap, Axios, MySQL, SQL, React, ASP.Net, Spring Boot, AWS, Postman, Swagger, HttpSession

Developed and managed a commercial vehicle auction platform, enabling users to bid on a diverse range of trucks, vans and heavy machinery. Integrated secure transaction processes, real-time bidding features, and detailed vehicle listing, streamlining the buying and selling experience for both businesses and individual customers

2. Sign Language Translation

Technologies: Python, Pandas, CNN, RNN, Keras, Pickle, TensorFlow, Tkinter, numpy

The Sign Language Translation project, developed using Python, leverages deep learning to recognize hand gestures and convert them into text and audio. It utilizes CNN and RNN models built with TensorFlow and Keras for accurate gesture classification. OpenCV is used for image processing, while Pandas and NumPy handle data operations. The trained models are saved using Pickle, and a user-friendly interface is created with Tkinter to facilitate seamless interaction. This system enables real-time communication for individuals with hearing impairments.

TECHNICAL CERTIFICATION

Devtown: Backend Web Development

LetsGrowMore: Virtual Internship in Web Development

Oasis Infobyte: Virtual Internship in Web Development and Designing

SOFT SKILLS

Good Communication Skills | Adaptability and Quick Learning | Attention to Detail | Time Management
